Abstract

The objective of this project is to construct assessment database for vocational-school students' English learning achievement. Test items will involve both skills in receptive and productive dimensions. The formal test is scheduled to be held next year. In addition, follow-up studies will attempt to trace students' developmental pattern in English learning, and individual difference in performance. Potential variables that will affect their English learning achievement will also be investigated. The result of the study will be used as reference for the educational authorities concerned in policy making and remedial education.
